

# The Super Extended Rolltop Desk

## Information & Specifications

*Super Extended Rolltop (SXEXT)*

The HSA Super Extended Rolltop gives you a convenient way to house and protect a wide variety of audio & video mixing consoles and 19" rack mount and non-rackmount electronic equipment. Very suitable for boardroom, Houses of Worship, educational, recording and other professional environments, the HSA Super Extended Rolltop Desk is an elegant and easy way to aesthetically blend audio, video and many other electronic systems into their surroundings.

**Construction:** The Super Extended Rolltop is handcrafted from a selection of lumber core and multi-cores with premium Red Oak faces for high dimensional integrity, consistency and strength. Our side-by-side pedestal construction style is aesthetically appealing, lends additional protection and assists in wire routing. Gently edge-rounded Red Oak solid moldings are applied for extra beauty and extra strength where it's needed most.

**Table Top:** The roomy, 68" wide table surface is at 25.875" height for comfortable operation of mixing consoles, keyboards, recording equipment, etc. There is an ample rear table top cable access to guide your cabling in addition to a 3" clearance between the table rear and tambour path. The wood construction of the table (and desk) provides easy custom on-site solutions to cable dressing/harnessing and special equipment/panel mounting needs.

**Lower Racks:** The twin (left & right undermounted) 10 space extra deep industry standard racks are designed to accept deep chassis power amplifiers and process electronics. We use heavy-duty steel rails with extra half-rack tapped screw holes to allow for a wide variety of equipment spacing. Clearance of 1.50 inches is given between the rack rails and tambour doors (see notes regarding lock clearance exceptions) for space for knobs and handles and to assist with ventilation. Rear clearance is maintained since the tambour doors stop before reaching the rear even when fully open. The tambour rack doors are secured with flush-mount brass cabinet locks keyed alike to the main tambour's lock. Additional ventilation

- THE MOST BEAUTIFUL & FUNCTIONAL SOLUTION FOR HOUSING ELECTRONIC SYSTEMS
- THIS LARGE, LOW-PROFILE DESK IS LESS THAN 37" HIGH
- TWO 10 SPACE LOWER RACKS
- UPPER & BOTH LOWER TAMBOURS LOCK
- SUPER WIDE TABLE TOP
- SOLIDLY & CAREFULLY CRAFTED WITH A VARIETY OF FINISHES

and the cable access ways are found at both the top and bottom of the rear of each rack. The racks have a removable rear panel in finished Oak for security and aesthetics.

**Tambours:** We hand build our own tambour doors to assure quality and extra strength. The 1" by 1/2" thick individual tambours are lead by a 2" wide solid oak lead tambour for extra strength at the locks and polished brass handles. The thicker profile results in a very smooth operation that can be maintained with an occasional application of ordinary wax. A flush mounted brass cabinet lock on the lead tambours engage on the desk's side, securing the tambour doors without getting in the way.

**Finish:** A variety of stain colors are available with our popular and environmentally friendly waterborne finishing system. These advanced waterborne stains, sealers and finish coats produce a beautiful grain pattern and depth of color. They maintain the natural feel of the wood yet offer some of the best protection from abrasion and spills and keep looking great with minimal upkeep. Actual color samples are available to help you make your selection.

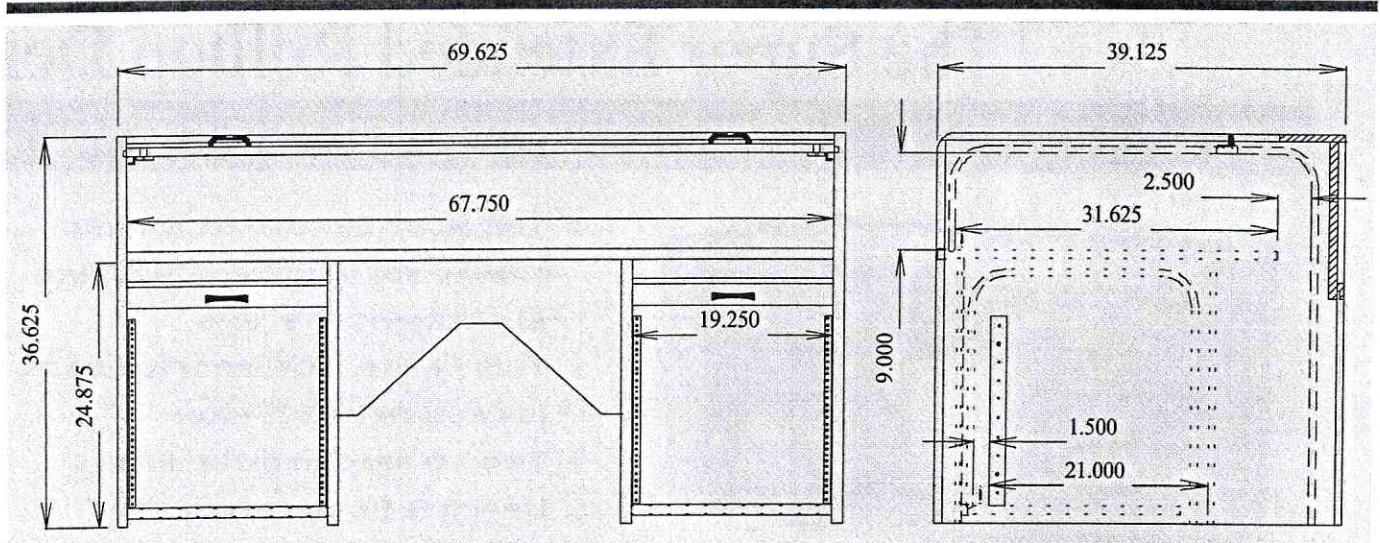

**Other Super Extended Rolltop Desk Benefits:** The Super Extended Rolltop offers additional safety and security by organizing equipment and wiring which, in modern open installations, could be a source of many problems. Being able to "lock-down" the system prevents unauthorized tampering with equipment and wiring between uses. Furthermore, the HSA Super Extended Rolltop Desk (and our other fine wood furnishings) convey an image of professionalism and quality, presenting your audio, video, lighting or any electronic system in the very best way and as a matching, integral part of its environment.

**Drawing Notes:** The maximum usable tabletop depth (front to back) for equipment is considered approximately 31.625 inches and the maximum height clearance is 9.00 inches. The maximum height is somewhat less near the front edge where the tambour curves downward. There is a 1.5" clearance between the backside of the lower rack tambour doors and the front surface of the rack rails. This clearance is adequate for most applications but be sure to measure equipment to be installed for all clearances to be positive. Additionally, a small amount of this clearance (and the table top tambour clearance also) is taken by the lock assemblies. They are approximately 0.5" thick out to about 2.750" from the sidewalls and about 0.75" thick within about 0.875" of the sidewalls. Although you can be sure that Standard 19" rack mount equipment will mount across our rack rails, wood is a natural product and overall working tolerances can be in the range of +/- 0.25" normally.

**Options/Customizations:** The Super Extended Rolltop is available with the following options: a) Optional Adjustable Shelving in the lower racks, b) Modesty Panel for closing off the lower rear portion of the desk when aesthetic considerations require it, c) RollBase which carries the desk on 8 twin-wheel furniture casters mounted to a support platform finished to the same color as the desk, d) Rear Accessway option for easier wiring, and e) GlideOut lower rack providing a 9 space angled, operator facing equipment rack. Other options, variations and customizations are available so contact your dealer or HSA directly for information.

**Warranty:** HSA warrants standard products for a period of one year and covers defects in materials and workmanship. Wood is a natural material and every piece is unique. Deviations in the final products from each other or samples in finish, color, contrast, density and pattern are to be expected and is part of the beauty and appeal in real wood products and are not considered defects under our warranty. The warranty does not cover improper installation or use of HSA products. The warranty also does not cover appearance or appearance items, finish items or any malfunctions caused by misuse or improper operation. HSA's liability does not include any consequential or resulting damage to person, property, equipment, goods, merchandise, profits, goodwill, or reputation arising out of any defect in or failure of product. Warranty items will be repaired or replaced at our option without charge for materials or labor, provided such items are returned for inspection, transportation prepaid, to HSA, Mishawaka, IN.

**Product specifications, availability and cost subject to change without notice.**
